CAS INDEXING IS AVAILABLE FOR THIS PATENT..

AB Microparticles with adsorbent surfaces, methods of making such microparticles, and uses thereof, are disclosed. The microparticles comprise a polymer, such as a poly(.alpha.-hydroxy acid), a polyhydroxy butyric acid, a polycaprolactone, a polyorthoester, a polyanhydride, and the like, and are formed using cationic, anionic, or nonionic detergents. Also provided are microparticles in the form of submicron emulsions of an oil droplet emulsion having a metabolizable oil and an **emulsifying** agent. The surface of the microparticles efficiently adsorb polypeptides, such as antigens, and nucleic acids, such as ELVIS vectors and other vector constructs, containing heterologous nucleotide sequences encoding biologically active macromolecules, such as polypeptides, antigens, and adjuvants. Methods of stimulating an immune response, methods of immunizing a host animal against a viral, bacterial, or parasitic infection, and uses of the microparticle compositions for vaccines are also provided.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A vaccine composition, comprising an antigenic substance in association
with a **liposome** and an oil-in-water emulsion comprising a
muramyl peptide, a metabolizable oil, and optionally an additional
emulsifying agent. The two components of the adjuvant (i.e., the
liposome/antigen component and the emulsion component) act
together to produce high levels of immune response.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.
